

vTag® Scanner: Handheld Application

TAGLESS QUANTITATIVE PART-LEVEL TRACEABILITY

Fully portable handheld (beta) system uses vTag® technology to provide end-to-end traceability of items within your supply chain. The Handheld vTag® Scanner will enable your staff to enroll and authenticate parts anywhere a WiFi or cellular data signal is available.

Tagless Part-Level Identification

- Optical scan is tagless - avoids handling and warranty issues
- No changes to the article or its packaging
- Enrollment and verification of an article can be done anywhere (factory, retail, point-of-sale, distribution).
- Easy to operate - requires minimal training
- Digital thread available at the part level
- Secure complete part history and digital travelers
- Enables security for:
 - Part traceability
 - Chain of custody
 - Counterfeit mitigation
 - Secure RMA process
 - Source of origin
 - Covert, unambiguous, unforgeable
